"OVERVIEW OF CLIMATE EXPERIMENTS AT HUBBARD BROOK EXPERIMENTAL FOREST"

WITH BRENDAN LEONARDI (HE/HIM)

Brendan will provide an overview of the Climate Change Across Seasons Experiment (CCASE), Ice Storm Experiment (ISE), DroughtNet (DN) and Hubbard Brook Nitrogen Oligotrophication Experiment (HBNO). All these projects explore how changes in climate will affect our northern hardwood forests in various ways. Having worked on all four of these projects over the last 5 years, Brendan will provide an inside scoop on these projects and how we work to research extreme weather, drought and nutrient availability at Hubbard Brook.

WE HOPE TO SEE YOU THERE!

CONTACT DAYNA DE LA CRUZ WITH ANY QUESTIONS.
