

Estimated leaf-out phenology for mid-elevation Bird Plot in 2024 based on thermal sums.

[As of 23 April, 2024](#), predicted dates for budburst and 90% completion of leaf expansion are:

12 May and 24 May.

Predicted median dates of arrival and 1st clutch initiation by Black-throated Blue Warblers are:

12 May and 31 May.

Real-time temperature records from USDA Forest Service station at Watershed 1.

Phenological models adapted from Lany et al. 2016 using long term data of USDA Forest Service.

[As of 23 April 2024](#), the forecast date of leafout is 12 May for mid-elevation bird plots at Hubbard Brook.

Phenology measurements by Northern Research Station, USDA Forest Service.

Leaf phenology model adapted from Nina Lany et al. 2016, *Oikos*.

Analyses by Matt Ayres et al., Dartmouth College.

Estimated leaf-out phenology for mid-elevation Bird Plot in 2024 based on thermal sums.

[As of 14 April, 2024](#), predicted dates for budburst and 90% completion of leaf expansion are:

11 May and 23 May.

Predicted median dates of arrival and 1st clutch initiation by Black-throated Blue Warblers are:

12 May and 30 May.

Real-time temperature records from USDA Forest Service station at Watershed 1.

Phenological models adapted from Lany et al. 2016 using long term data of USDA Forest Service.

[As of 14 April 2024](#), the forecast date of leafout is 9 May for mid-elevation bird plots at Hubbard Brook.

Phenology measurements by Northern Research Station, USDA Forest Service.

Leaf phenology model adapted from Nina Lany et al. 2016, *Oikos*.

Analyses by Matt Ayres et al., Dartmouth College.

Estimated leaf-out phenology for mid-elevation Bird Plot in 2024 based on thermal sums.

[As of 7 April, 2024](#), predicted dates for budburst and 90% completion of leaf expansion are:

6 May and 19 May.

Predicted median dates of arrival and 1st clutch initiation by Black-throated Blue Warblers are:

11 May and 28 May.

Real-time temperature records from USDA Forest Service station at Watershed 1.

Phenological models adapted from Lany et al. 2016 using long term data of USDA Forest Service.

Date of bud-burst in beech, birch, and maple

[As of 7 April 2024](#), the forecast date of leafout is 6 May for mid-elevation bird plots at Hubbard Brook.

Phenology measurements by Northern Research Station, USDA Forest Service.

Leaf phenology model adapted from Nina Lany et al. 2016, *Oikos*.

Analyses by Matt Ayres et al., Dartmouth College.

Estimated leaf-out phenology for mid-elevation Bird Plot in 2024 based on thermal sums.

[As of 28 March, 2024](#), predicted dates for budburst and 90% completion of leaf expansion are: 11 May and 23 May.

Predicted median dates of arrival and 1st clutch initiation by Black-throated Blue Warblers are: 12 May and 30 May.

Real-time temperature records from USDA Forest Service station at Watershed 1.

Phenological models adapted from Lany et al. 2016 using long term data of USDA Forest Service.

Date of bud-burst in beech, birch, and maple

[As of 28 March 2024](#), the forecast date of leafout is 11 May for mid-elevation bird plots at Hubbard Brook.

Phenology measurements by Northern Research Station, USDA Forest Service.

Leaf phenology model adapted from Nina Lany et al. 2016, *Oikos*.

Analyses by Matt Ayres et al., Dartmouth College.
